

### 1. Dear Customers

- The A&D blood pressure monitor is one of the most advanced monitors available and is designed for ease of use and accuracy. This device will facilitate your daily blood pressure regimen We recommend that you read through this manual carefully before
- using the device for the first time

## 2. Preliminary Remarks

- This device conforms to the European Directive 93/42 EEC for Medical Products. This is made evident by the CC<sub>0123</sub> mark of conformity. (0123: The reference number to the involved notified body)
- The device is designed for use on adults only, not newborns or infants
- Environment for use. The device is for use in the home healthcare environment This device is designed to measure blood pressure and pulse rate
- of people for diagnosis

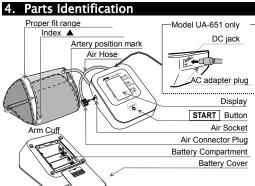

### Precautions

- Precision components are used in the construction of this device Extremes in temperature, humidity, direct sunlight, shock or dust should be avoided
- Clean the device and cuff with a dry, soft cloth or a cloth dampened with water and a neutral detergent. Never use alcohol, benzene, thinner or other harsh chemicals to clean the device or cuff.
- Avoid tightly folding the cuff or storing the hose tightly twisted for long periods, as such treatment may shorten the life of the components.
- Take care to avoid accidental strangulation of babies or infants with the hose Do not twist the air hose during measurement. This may cause
- injury due to continuous cuff pressure. The device and cuff are not water resistant. Prevent rain, sweat
- and water from soiling the device and cuff. Measurements may be distorted if the device is used close to
- televisions, microwave ovens, X-ray or other devices with strong electrical fields. Wireless communication devices, such as home networking
- devices, mobile phones, cordless phones and their base stations, walkie-talkies can affect this blood pressure monitor. Therefore, a minimum distance of 11 feet should be kept from such devices.
- When reusing the device, confirm that the device is clean. Used equipment, parts and batteries are not treated as ordinary household waste, and must be disposed of according to the
- applicable local regulations. Do not modify the device. It may cause accidents or damage to the device.
- To measure blood pressure, the arm must be squeezed by the cuff hard enough to temporarily stop blood flow through the artery. This may cause pain, numbness or a temporary red mark to the arm. This condition will appear especially when measurement is repeated successively. Any pain, numbness, or red marks will disappear with time.
- Measuring blood pressure too frequently may cause harm due to blood flow interference. Check that the operation of the device does not result in prolonged impairment of blood circulation, when using the device repeatedly.
- Clinical testing has not been conducted on pregnant women. Do not use the device on pregnant women.
- If you have had a mastectomy, please consult a doctor before using the device.
- Do not let children use the device by themselves and do not leave the device within the reach of children.  $\ensuremath{\,\square}$  There are small parts that may cause a choking hazard if
- swallowed by mistake by infants.
- Do not touch the batteries, the patient and the DC jack at the same time. That may result in electrical shock

#### Contraindications

- The following are precautions for proper use of the device Do not apply the cuff on an arm with another medical electrical
- equipment attached. The equipment may not function properly. People who have a severe circulatory deficit in the arm must consult a doctor before using the device, to avoid medical
- problems Do not self-diagnose the measurement results and start treatment by yourself. Always consult your doctor for evaluation of the results and treatment.
- Do not apply the cuff on an arm with an unhealed wound. Do not apply the cuff on an arm receiving an intravenous drip or
- blood transfusion. It may cause injury or accidents. Do not use the device where flammable gases such as
- anesthetic gases are present. It may cause an explosion. Do not use the device in highly concentrated oxygen environments, such as a high-pressure oxygen chamber or an

# oxygen tent. It may cause a fire or explosion

Take another measurement.

Remain still during

measurement

6.1. Installing / Changing The Batteries

Unstable blood pressure due

to movement during

neasurement

- Remove the battery cover.
   Remove the used batteries from the battery compartment in case
- of changing them. 3. Insert new batteries into the battery compartment as show taking care that the polarities (+)
- and (-) are correct Replace the battery cover. Use only R6P, LR6 or AA batteries.
- CAUTION
- Insert the batteries as shown in the battery compartment. If installed incorrectly, the device will not work.
- When [ ] blinks on the display and the device announces that the battery needs to be replaced, replace all batteries with new ones. Do not mix old and new batteries. It may shorten the battery life, or cause the device to malfunction. Replace the batteries two seconds or more after the device turns off.

Step 2

- does not appear when the batteries are drained
- The battery life varies with the ambient temperature and may be shorter at low temperatures. Generally, four new R6P batteries will last approximately for three
- months when used twice for measurement each day.
- Use the specified batteries only. The batteries provided with the device are for testing the device performance and may have a limited life. Remove the batteries if the device is not to be used for a long time. The
- batteries may leak and cause a malfunction 6.2. Connecting The Air Hose

Insert the air connector plug into the air socket firmly. Air Hose

Air Connector Plug Air Socket

(E

AC adapter Plug DC jack

6.3. Connecting The AC Adapter Model UA-651 only

Insert the AC adapter plug into the DC jack. Then, insert the AC adapter into an electrical outlet. The AC adapter, the model TB-233C is sold separately

- When disconnecting the AC adapter from the electrical outlet grasp and pull the AC adapter body
- out of the outlet. When disconnecting the AC adapter plug from the blood pressure monitor, grasp and pull the AC adapter plug out of the monitor.

## 6.4. Selecting The Correct Cuff

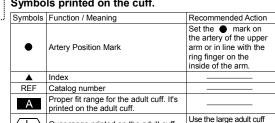

- Using the correct cuff size is important for an accurate reading. If the cuff is not the proper size, the reading may yield an incorrect blood pressure value.
- The arm size is printed on each cuff.
- The lindex ▲ and proper fit range, on the cuff, tell you if you are applying the correct cuff. Refer to "6.5 Applying The Arm Cuff". □ If the index ▲ points outside of the range, contact your local dealer to purchase a replacement cuff

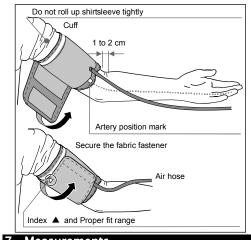

The arm cuff is a consumable. If it becomes worn, purchase a new one.				
Arm Size	Recommended Cuff Size	Catalog Number

## 7. Measurements

7.1. Normal Measurement Place the cuff on the arm at heart level (preferably the left arm). Sit

- At heart level quietly during measurement. Press the START button Press the START button. All of the display segments are displayed. Zero is displayed All of the display segments blinking briefly. Then the display changes, as indicated in the figure at the right, as the measurement begins. The cuff Zero display starts to inflate. It is normal for the cuff to feel very tight. A pressure bar indicator is displayed, as in the figure at the right, during Starts inflation inflation Note: If you wish to stop inflation at any time, press the START button again 3. When inflation is complete Pressurizing deflation starts automatically and the 🎔 (heart mark) blinks, indicating that the measurement is in progress. Once the pulse is Measurement in progress detected, the mark blinks with each pulse beat. Note: If an appropriate pressure is not Systolic pressure
- obtained, the device starts to Diastolic pressure inflate again automatically WHO classification œ. 4. When the measurement is
- Pulse rate complete, the systolic and Exhausts remaining air diastolic pressure readings and automatically pulse rate are displayed. The cuff Turn off with the exhausts the remaining air and START button

At heart level

Press and hold the

Inflation in progress

button to stop inflation

The desired pressure

Refer to the section

START button

- deflates completely.
- 5. Press the <u>START</u> button again to turn off the power. Note:Model UA-611 and UA-651 are provided with an automatic pow shut-off function. Allow at least 3 minutes between measurements of the same person

## 7.2. Measurement with the Desired Systolic Press

If re-inflation occurs repeatedly use the following methods. If your systolic pressure is expected to exceed 230 mmHg, use this Press the START button procedure.

- 1. Place the cuff on the arm at heart level (preferably the left arm).
- 2. Press the START button

Step <sup>·</sup>

- 3. During the zero blinks, press and hold the <u>START</u> button until a number about 30 to 40 mmHg higher than your expected systolic pressure appears.
- 4. When the desired number is reached, release the START button to start measurement. Then continue to measure your blood pressure as described on the section "7.1 Normal Measurement".

## "7.1 Normal Measurement"

## 7.3. Notes for Accurate Measurement

Sit comfortably on a chair. Rest your arm on the table. Do not cross your legs. Keep your feet on the floor and straighten your back. Sit down in a comfortable position. Place your arm on a table with your

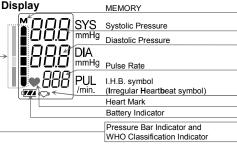

- palm facing upward and the cuff at the same level as your heart.
- Place the center of the cuff at the same level as your heart. Relax for about five to ten minutes before measurement. If you are excited or depressed by emotional stress, the measurement will reflect
- this stress as a higher (or lower) than normal blood pressure reading and the pulse reading will usually be faster than normal. Remain still and keep quiet during measurement.
- Do not measure immediately after physical exercise or a bath. Rest for twenty or thirty minutes before taking the measurement.
- An individual's blood pressure varies constantly, depending on what you are doing and what you have eaten. What you drink can have a
- very strong and rapid effect on your blood pressure. This device bases its measurements on the heartbeat. If you have a very weak or irregular heartbeat, the device may have difficulty determining your blood pressure.
- Should the device detect a condition that is abnormal, it will stop the measurement and display an error symbol. Refer to the section "5 Symbols" for the description of the symbols
- This device is intended for use by adults only. Consult with your physician before using this device on a child. A child should not use this device unattended.
- Try to measure your blood pressure at the same time every day The automatic blood pressure monitor's performance may be affected by excessive temperature or humidity, or altitude.

			lar Heartbeat			
	The UA-611 and UA-651 provide a blood pressure and pulse rate measurement even when an irregular heartbeat occurs. An					
	irregular heartbeat is defined as a heartbeat that varies by 25%					
	from the average of all heartbeats during the blood pressure					
	measurement. It is important that you are relaxed, remain still					
	and do not talk during measurements. Note: We recommend contacting your physician if you see this «
